

## Starter Won't Crank Engine; Vehicle Won't Shift out of Park; Multiple Indicators On; No Communication with Transmission

### AFFECTED VEHICLES

2016 Civic with CVT

Do you have a vehicle in your shop because of this issue?

- The starter won't crank the engine, and/or the vehicle won't shift out of park.
- Multiple indicators are lit on the instrument panel, and DTC U0038 (TM-CAN malfunction [TCM-PCM]) and U0101 (gauge control module lost communication with A/T) are set.
- There's no communication with the transmission.

We currently have this issue under investigation. So far, we've found the root cause is the TCM.

Until we come up with a countermeasure, replace the TCM.
