2015-2016 eGolf – Mandatory Attachment to VTA

Any eGolf that has a drivability or charging concern has a specific **MANDATORY** attachment requirement prior to opening a VTA. DO NOT erase any faults codes. Please attach a GRX3000VAS-battery tester/charger (or equivalent) on the 12 volt battery. Ensure that the battery is holding 12.5-14.5 volts and perform a full system scan. Save and attach the long ODIS log. Then go into address words 8C and 51 > OBD > Measured values >>> select all. Attach this to the VTA as well.
