DEF INJECTOR ASSEMBLY REPLACEMENT

SUBJECT VEHICLES: 11MY-17MY Conventional Trucks or 13MY-17MY COE (Cab over Engine) Trucks

Note: This tech tip is provided as technical information and is not authorization for a warrantable repair.

OVERVIEW:

Current production DEF injectors contain enhancements including improvements to the aluminum housing. When replacing the DEF injector, it is necessary to install the complete DEF injector assembly (Part no. S17J0-E0020) onto the vehicle, not only the center injector portion. Replacing only the center portion of the DEF injector and reusing the existing housing WILL result in warranty charge back.

Do Not Separate Injector from Housing
