### **Car-Net Module Housing Loose at PDI**

The Car-Net module housing may be loose underneath the passenger seat. This may be found during PDI or from a customer complaint.

## Technical Background

Cut-outs in the carpet may not have been removed in the factory which prevents the Car-Net module housing from being properly installed.

## Production Solution

Production is removing the cut-out holes from the carpet to guarantee the correct fixation of the Car-Net module housing as of VIN AJ\_HM258458.

# Technical Bulletin

---

## Service

### Procedure:

During PDI inspect the Car-Net module housing which is mounted underneath the passenger front seat (Figure 1).

**Figure 1: Car-Net module housing loose**

# Technical Bulletin

If the module housing is loose, not flat against the floor, or is rubbing the seat fore/aft adjustment lever, check that the pre-perforated cut-outs have been removed from the carpet (Figure 2).

**Figure 2: Pre-perforated carpet cut-outs not removed**

Remove the carpet cut-outs if they haven't already been removed and reinstall the module housing by first inserting the tabs on the housing through the cut-outs in the carpet, then pressing the housing down onto the carpet to secure the Velcro fastener (Figures 3 and 4).

**Figures 3 and 4: Carpet cut-outs removed and locking tabs on housing**

# Technical Bulletin

---

If the cut-outs have already been removed, ensure the housing is reinstalled properly (Figure 5).

**Figure 5: Car-Net module housing properly installed.**
