Service Bulletin

Service Bulletin #TS-0032: Tie Down Engineering Brake Calipers

Condition: Caliper assembly may not completely disengage brake pads from rotor

Models Affected: All disc brake equipped Trailstar trailers manufactured between April 6, 2015 and May 2, 2016

Labor time allowed: .3 hr Check, No problem found

.5 hr Replace 1 caliper

.6 hr Replace 2 calipers

Bulletin Information

DESCRIPTION OF CONCERN:

The disc brake calipers can create excessive brake heat due to not completely disengaging the brake pads from the rotors after the brakes have been applied and released.

AFFECTED PART NUMBERS:

Part #172701 or part #184793 brake calipers are the replacement components for depending on the caliper requiring replacement.

VERIFICATION PROCESS:

Perform the test process as instructed in the provided Tie Down Engineering technical service bulletin.

CORRECTIVE ACTION:

Replace any caliper displaying the characteristic described in the test procedure. Identify the required replacement caliper using the images provided in the bulletin.

When filing a warranty claim for reimbursement, include only parts and labor directly associated with this bulletin.

Direct any questions to Tracker Marine Group Warranty Department at 866-378-2529.

**PLEASE READ THE ENTIRE INSTRUCTION SET BEFORE
PROCEEDING WITH ANY CORRECTIVE ACTION**

Trailer Jacking Recommendations

Visually inspect the trailer prior to securing the trailer on a jackstand.

Begin this process only after the following safety precautions have been followed if jacking up the trailer is required.

- **It is recommended to have the trailer on a smooth and level concrete or asphalt surface to perform the corrections.**
- **Jack up the trailer using a jack of adequate capacity to lift the package. Chock the opposite wheel fore and aft if only jacking up one side.**
- **Secure the trailer on a jackstand of adequate capacity to support the package.**
- **When jacking and using jackstands, place them to clear wiring, brake lines, and suspension parts.**
- **Lug nuts should be tightened to 90 ft lbs when reinstalling wheels.**

TIE DOWN ENGINEERING TECHNICAL SERVICE BULLETIN

IMPORTANT INFORMATION for Nitro, Tahoe and Mako Skiff Boat Trailers

Subject : Disc Brake Caliper Sticking Brake Pads

CONDITION

It has been found that some disc brake calipers (TDE # 46304) that were installed during manufacturing dates April 06, 2015 and May 02, 2016, on Nitro, Tahoe and Mako skiff Trailers could exhibit excessive heat on the rotors. This is caused by the caliper assembly not completely dis-engaging the brake pads from the rotor after the brakes have been applied and released. Should you or your customer experience overheating brakes or “dragging” brakes, REPLACE caliper, do not attempt to rebuild or repair the caliper.

DETERMINING IF YOU HAVE A QUALIFIING TRAILER

Disc Brakes operate in a temperature range of 110 to 200 degrees. Disc brake pads are designed to “rest” on the rotor at all times, unlike a drum brake. If you think a brake or brakes on a trailer may have a caliper issue, properly block the trailer, use a floor jack to lift the wheel off the ground (use a jack stand for safety), turn the wheel by hand. You should hear a soft “whispering” sound of the pads riding on the rotor, this is normal. **Dragging brakes will make the wheel difficult to turn and the noise will be louder coming from the pads pressing on the rotor.**

ACTION REQUIRED

If you discover a wheel that is hard to rotate due to a dragging caliper, follow the attached instructions for removing and replacing the caliper. Following caliper replacement, bleed the brakes and road test the trailer.

TOOLS REQUIRED

7/16” hex socket for the caliper pins
3/8” wrench for the brake hose line
¾” Socket
Bleed Pot
Floor Jack
Jack Stand

REPLACEMENT PROCEDURE - REFERENCE SHEET #1282 PROVIDED IN THIS BULLETIN.

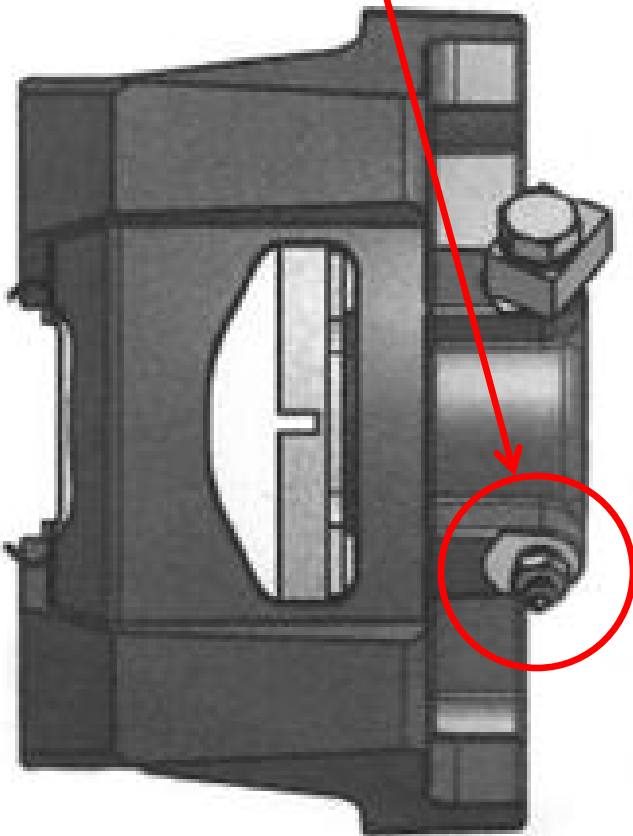

Estimated time to complete – .3 hr – No problem found

.5 hr – 1 caliper (includes bleed time)

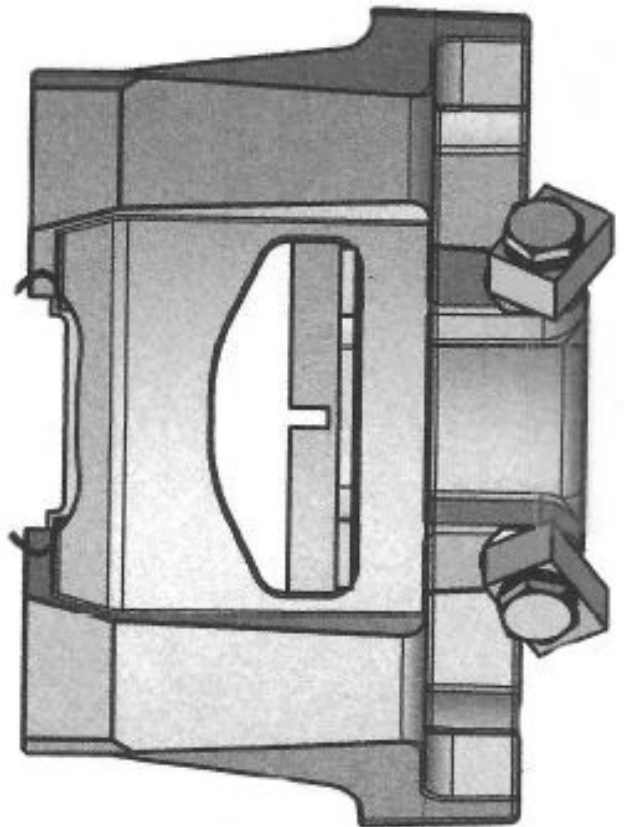

.6 hr – 2 calipers. (includes bleed time)

Identify the required replacement caliper using the illustrations below. Part #172701 has a bleeder fitting; part #184793 does not.

Bleeder fitting

Part #172701

Part #184793

Replacement of Disc Brake Caliper

Reference Sheet #C1282 (January 2013)
(Tie Down #46304 Caliper)

Removing Caliper from Rotor

1. Elevate the trailer using the trailer manufactures instructions. Always use jack stands for support. Do not depend on a jack to support the trailer. Block the trailer wheels to keep trailer from rolling.
2. Remove the tire/wheel assembly. Inspect the rotor surface. Check for excessive wearing or grooves that may affect braking. Please consult owner's manual for minimum rotor thickness.
3. Remove the caliper by unscrewing the slider pins from the mounting bracket (Fig.1). Use a 7/16" socket drive or wrench to remove pins. Be careful to hold caliper in place so that it does not fall and pull on or damage the brake line. Once pins are removed, disconnect brake line and remove caliper from the rotor.

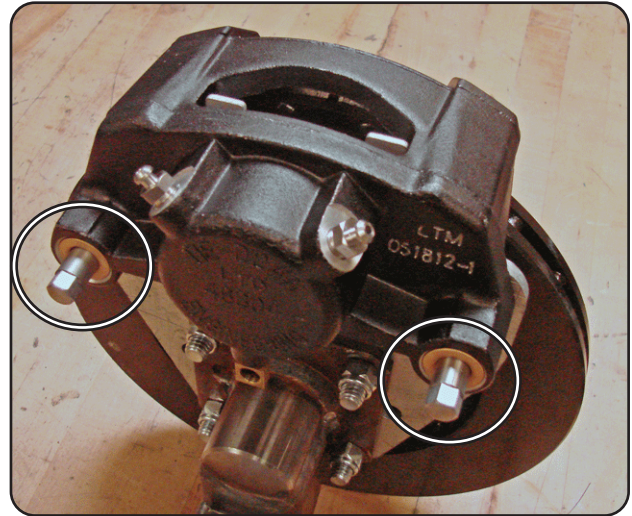

Fig. 1

Installing New Replacement Caliper

1. Clean threads of slider pins. Apply red thread lock to the threads on the mounting bracket as shown (Fig. 2). **DO NOT REASSEMBLE WITHOUT APPLYING RED THREAD LOCK TO THE THREADS. SLIDER PINS COULD BACK OUT AND CAUSE PERMANENT DAMAGE TO YOUR ROTOR, CALIPER AND TRAILER.**
2. Slide new caliper over rotor and align bushing holes. Insert slider pins and tighten pins to **40** ft. lbs.
3. Reconnect brake line to the caliper. Bleed caliper to remove any air that may be in brake line. Test brakes to be sure that all components are working properly.
4. Reinstall tire/wheel assembly. Torque lug nuts to trailer or wheel manufacturer's specifications. Recheck lug nuts after towing.
