Subject: GALVASHIELD® IMPACT Trailer Finish

We are excited to announce the new GALVASHIELD® Impact trailer finish.

The following sheet will explain how this finish gives our trailers the edge by making them harder and longer lasting while protecting them from corrosion and chipping.

The new finish is now standard on all TRACKER®, GRIZZLY®, SUN TRACKER®, NITRO®, and REGENCY® Boats. TAHOE® 400, 450, 500, and 550 series, Topper and ASCEND® trailers are expected to transition to the new finish sometime in the next model year.

Thank you,

Tougher. Good looking. Long lasting.

- Tough, eco-friendly textured powder coat
- 43% thicker than previous powder coat (5 vs 3.5 mils) for increased chip resistance
- Galvanized trailer frame tube-inside and out
- Attractive textured matte finish that is easy to clean

The new GALVASHIELD® Impact trailer finish is a 5-mil.-thick, matte black, textured powder coat that retains the corrosion-resistance of the previous finish while offering increased chip-resistance.

The steel tubing is still galvanized on the outside and inside and sealed with a flexible clear coat before it arrives at our plant in Ozark. The trailer frame and components are put through a five stage wash and then thoroughly dried to ensure perfect adhesion of powder coat to the metal.

For the application of the powder coat finish the trailer components receive an electrostatic charge, which attracts the opposite charge in the powder coat particles. This assures thorough coverage, uniform thickness, and minimal waste.

The powder coat finish is then heated to its melting point as it bonds securely to the galvanized metal at the molecular level. The result is a harder, longer lasting, and environmentally-friendly finish that protects from both corrosion and chipping.

The new finish is now standard on all TRACKER®, GRIZZLY®, SUN TRACKER®, NITRO®, and REGENCY® boats. TAHOE® 400, 450, 500, and 550 series, Topper, and ASCEND® trailers are expected to transition to the new finish sometime in the next model year.
