Technical Update

Date: 8/11/16

Models: 15-16 Ford F150 4wd w K4189B / 52221B

Overview:

Excessive adjustable steering stop height will reduce turning radius and create noise when not set up per 52221B instructions. This important instruction is often overlooked.

Engineering has confirmed that (1) 90-5579 shim under each 90-5577 steering stop cap provides the desired steering wheel position as indicated in the 52221B_K4189B instructions. Current 5/16"-18 x 1" low head cap screws may be too long for (1) 90-5579 shim and 90-5577 steering stop cap.

Solution:

Set up knuckles with (1) 90-5579, shim under each 90-5577 steering stop cap and fasten with 5/16"-18 x .75" low head cap screws - see **Image A**.

Hardware bag 90-60649 with (8) 5/16"-18 x .75" screws will be available within 10 days
