MASERATI

Subject: MY 17 M161 Rear License Plate Mounting Bracket

Description: MY17 M161 Rear License Plate Mounting Bracket Procedure.

- 1) Beginning on Wednesday September 14, 2016 Maserati NA, port locations will begin placing one rear License plate bracket into the rear cargo area of each M161 Levante prior to leaving the port.
- 2) For vehicles currently at the dealer location, Maserati NA Aftersales will ship brackets to the attention of the Service Manager at each dealer. The quantity will be based on current inventory of non-retailed Levantes.
- 3) Installation requires the bracket, quantity (2) 6mmx12mm hex bolts and 6 mm washers which are sourced locally through the dealership's fastener supply cabinet.

- 4) Open the bracket from the package, obtain the two fasteners and washers and orient the bracket to the rear tail gate of the vehicle as shown. Torque the 6mm hex bolt to 4-5NM.

- 5) If the dealership is installing their own exterior license plate trim frame, use the screws provided or 4 suitable pan head Philips screws to attach the license plate to the mounting bracket. The screws should NOT make contact to the tailgate when you install the screws.
