

DISTRIBUTOR BULLETIN

Distributor,

We are excited to launch the model, option and accessory updates for the 2016 snowmobile and enclosed trailer season. Standard discount months for this year on enclosed models are as follows: 5% May, 5% June, 4% July and 3% August (except Vault, Cargo and TCs). Please be aware that there is a small price increase on some models due to rising costs, for details see the pricing and program materials on the distributor suite. These materials can be found in the manuals section under the category of Snowmobile, Covers, TC's and Enclosed.

Some changes not pictured on subsequent pages include:

- The quad floor now meets the deck height on the Prestige and Lowboy ramp approach.
- XT Enclosed models no longer come standard with a roof vent, however a 09570 roof vent accessory can be added.
- The stainless steel door latch upgrade, 08878, is discontinued on CT and XT enclosed models.
- The enclosed oval halogen loading light accessory 09561-I, will now be rectangular in shape and LED. The updated part number is 17724. This is available in a single light kit or optional dual light kit.
- The 09756 side vent option will be screwed in place instead of welded and can be used as a field install kit. The front side vent will be moved to the first full width uprights, approximately 4-5" back. The rear vent will be moved forward to the last full width uprights approximately 4-5" forward.

We've been working hard in the off season to increase our enclosed, TC and cover capacity. A major layout change in building 5 and 6 is underway and scheduled for completion in May of 2015. It is always important to note that it's in everyone's best interest to get orders in as soon as possible. Our next step is to update the enclosed quoting and will be out to you by April 28th.

We appreciate your commitment to Triton and the most recent successful 2015 season. We look forward to a great year in 2016!

Warm Regards,
Sales & Marketing

2016 ENCLOSED UPDATES

Several additions have been made to the line-up of enclosed accessories.

Jack-Knife Couch 18236

This comfortable jet black couch folds flat and out of the way to make room for intended cargo.

With a jack-knife motion the couch goes from a sitting to laying position. For factory install a wall quickslide™ must be ordered. Recommended height is 11" on center from deck.

In the sleeping position the couch is 40" wide by 76" long.

4-Helmet Black Cabinet 09257-BK

4 place black gloss helmet cabinet. Also available in a 2 place 09256-BK.

shown with optional 14713 clothes hanger kit

Black Cove

A black cove shown with LED lights creates a sharp contrast.

Fuel Door

A running change is taking place on the fuel door. The new fuel door has a sturdy full panel hinge. The weldment will be screwed in place instead of welded and can be used as a field install kit. All fuel doors will be installed 28" from the floor to the bottom of the fuel door. However, the door will be moved accordingly to not interfere with a combo wall or the combo wall will be removed. The key series will not change.

Double DIN Radio 18284

This Kenwood or equivalent AM/FM radio, CD/DVD player is bluetooth ready and SiriusXM capable. It includes four Yamaha indoor/outdoor speakers. A helmet cabinet is required for installation.

Also available is a Single DIN size 18283

Side Access Door

A running change is taking place on the side access door design for Vault, CT, XT, Prestige and Lowboy. The new design features a laminated exterior and interior as well as a core fully bonded to the door frame. This new design is stronger. Drip rail above the radius of the door is standard for additional leak protection. The key series will not change

shown with optional 16167 keyless entry

Wheel Well Black Gloss Cabinet 10397-BK

Containing multiple shelves this cabinet is mounted on the wheel well of the Lowboy series only.

2016 OPEN SNOW UPDATES

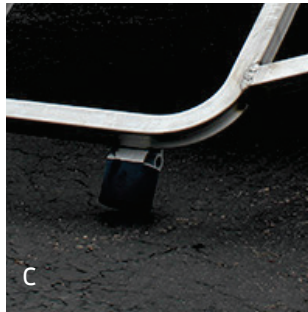

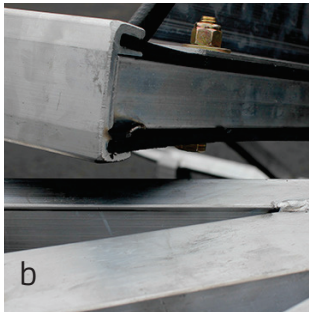

Elite and XT-QP

New for the 2016 season Elite and XT-QP models will come standard with all LED lights.

DOS Shield 09576

Tongue lengths on all tandem open snow trailers have been consolidated to 60" in length from the front cross member to end. With that change in mind, the DOS ramp was updated and tested. The DOS ramp can still be folded down for unloading without requiring you to turn or angle your trailer. This is displayed in image a. Image b demonstrates the increased gap between the tongue and unfolded ramp. Lastly the bumper placement has been moved to slightly lift ramp height and give better footing.

TRAILER LABELS

In response to several requests, a label with the model's broad name will be adhered to the driver's side rear cross member of every trailer. This label will help identify trailers at a quick glance. By "broad name" we mean the label will not differentiate bi-fold, TR, X/T/S models on watercraft, brake options and the like. The new label is weatherproof and will remain with the trailer for its life. This will take effect April 20th 2015.
