Dash Mounted Ammeter

HDX / EFX

This PAB is to help eliminate some confusion concerning ammeter options for both the HDX and EFX product lines. The ICU instrument panel for both the Saf-T-Liner EFX and HDX have the ability to display an ammeter in the cluster display. In order to activate this function, you must order a dash mounted ammeter option. Without ordering this option, the ammeter in the cluster display will not display amp readings.

Please be aware that the ammeter options listed below are not separate dash mounted gauges. These codes provide the necessary wiring and sensors to activate the ammeter located in the driver's dash display.

C3615-07-000 (Ammeter, Dash Mounted, Saf-T-HDX)

C3615-04-000 (Ammeter, Dash Mounted, Saf-T-Liner EFX)

Please let us know if you still have questions or concerns with either of these options.
