2017 Cummins B6.7 Engines

Cummins Engine Company has released new engine configurations to comply with GHG 2017 emissions standards. Engines installed in our vehicles built on or after **01/01/2017** must comply with this set of standards. We will be discontinuing current Cummins ISB diesel engine sales codes and issuing new codes for immediate sales use.

The new engines will be required to monitor water in fuel to a higher degree and due to this we are releasing a new series of fuel/water separator offerings from Detroit Diesel and Davco.

We will be updating any of your committed orders for ISB diesels that are building on or after the January compliance date.

Below is a summary of changes that will take effect in ASIST on 11/4/16 .
