SUBJECT: **DD Platform Fuel Cooler Delete Bypass Plate – Two-Filter System**

ISSUE

Beginning May 2, 2014, engines with the two-filter fuel system will be built with the fuel cooler delete bypass plate in place of the fuel cooler. The updated module with the fuel cooler delete bypass plate is backward compatible with engines built with a fuel cooler.

Module with fuel cooler delete bypass plate

Module with fuel cooler

REQUIRED ACTION

Note: Some applications will require removal of the low pressure fuel lines to identify if the fuel cooler is present.

When directed to pressure test the fuel cooler, first verify if the unit is equipped with a fuel cooler before removing the fuel filter module. This can be done by using a mirror to look between the fuel filter module and the cylinder block. The fuel cooler can be identified by the ribbed exterior as shown in Figure 2.

ADDITIONAL INFORMATION

If troubleshooting has led to replacement of the fuel cooler, the delete bypass plate is also available by itself through kit P/N: A4720700079.
