AEV Dealer Sales Bulletin

AEV will be discontinuing the option to add an ammeter on all Ford Transit Models.

This decision has been made based on information obtained from the Ford Body and Equipment Mounting Manual. AEV is unable to modify or connect to the battery ground cables on these chassis. In order for the sensor to read correctly the chassis and conversion grounds would need to be combined. This is not allowed.

If you have additional questions, please contact Randy Barr
at randy.barr@aev.com.
