

Product News Flash**Trailer Roller Load Guides 2017**

The following 12 inch Roller Load Guides are discontinued with very limited quantities available as of this date:

- TA0251-__
- TA0252-__
- TA0253-__

The above load guides have been replaced by a new line of Roller Load Guides designed with quick detach "Softube" rollers. The roller assembly consists of a spindle tube that attaches to the base bracket with a single bolt for quick removal. A 24 inch polyethylene tube with a soft, rubbery casing slides loosely over the spindle to create the 'roller'. This longer roller with the soft casing is both functional and boat friendly for a variety of boat hull styles. Please refer to attached PDF for illustrations & parts list.

These new Roller Load Guides are available now.
