 Date: August, 2016

TECHNICAL

Subject: Windshield Washer Fluid Leak After Solvent Fill

Brand:	Model:	Model Year:		VIN:		Engine:	Transmission:
		from	to	from	to		
Buick	Envision	2016	2016	SOP 2016	May 29, 2016	All	All

Involved Region or Country	North America
Condition	Some customers may comment that after topping off the windshield washer fluid level in the reservoir, fluid is seen leaking from the solvent container.
Cause	 <p style="text-align: right; font-size: small;">4573498</p> <p>The cause of the condition may be due to an unintended flashing on the parting line of the filler tube at the grommet, created when it is molded during production.</p>

Correction

A redesign of the solvent container filler tube eliminates the parting line flash, allowing a proper sealing interface to the grommet. Replace only the windshield washer solvent container filler tube and grommet, referencing the Parts Information below.

4572328

Replace the windshield washer solvent container filler tube and grommet. Refer to *Windshield Washer Solvent Container Filler Tube Replacement* in SI.

GM bulletins are intended for use by professional technicians, NOT a "do-it-yourselfer". They are written to inform these technicians of conditions that may occur on some vehicles, or to provide information that could assist in the proper service of a vehicle. Properly trained technicians have the equipment, tools, safety instructions, and know-how to do a job properly and safely. If a condition is described, DO NOT assume that the bulletin applies to your vehicle, or that your vehicle will have that condition. See your GM dealer for information on whether your vehicle may benefit from the information.
