

Instrument Cluster, Reprogramming LR

FSB 381-017, Instrument Cluster, Reprogramming (MID 140)

(April 2017)

On Mack LR models with PDLO, Power Divider Lock Out, the alarm for this feature, while engaged, will only sound once and the volume may seem low. There will be a continuous pop-up in the instrument cluster while engaged. This is due to an instrument cluster SW issue. To correct this issue follow the procedure below.

Note: This bulletin does not apply to MACK Trucks Australia.

Decommissioning the Truck for Repair

You must read and understand the precautions and guidelines in Service Information, group 30, "General Safety Practices, Electrical" before performing this procedure. If you are not properly trained and certified in this procedure, ask your supervisor for training before you perform it.

NOTE: Information is subject to change without notice. Illustrations are used for reference only and can differ slightly from the actual vehicle being serviced. However, key components addressed in this information are represented as accurately as possible.

- 1 Park the vehicle on a flat and level surface.
- 2 Apply the parking brake.
- 3 Place the transmission in neutral or park.
- 4 Install the wheel chocks.

W7086748

Instrument Cluster, Reprogramming Procedure

- 1 Connect Premium Tech Tool to vehicle.
- 2 Use the program tab to reprogram the instrument cluster (MID 140) to the latest software level.

Commissioning the Truck for Operation

- 1 Remove the wheel chocks.

W7086759

- 2 Check the operation of the instrument cluster.

Reimbursement

This repair may be eligible for reimbursement if a product failure was experienced within time and mileage limits of the applicable Warranty coverage. Reimbursement is obtained via the normal claim handling process.	UCHP Reimbursement
