CLICKING NOISE FROM FRONT OR REAR AXLE DURING TAKE-OFF/ACCELERATION

This bulletin has been amended. The APPLIED VEHICLES section has been revised. No other changes have been made. Please discard previous versions of this bulletin.

APPLIED VEHICLES:
- 2010–2018 370Z Coupe and Roadster (Z34)
- 2010–2013 Altima Coupe (CL32)
- 2010–2011 Altima Hybrid (L32H) 2011–2017 Quest (E52)
- 2010–2017 Altima Sedan (L32/L33) 2010–2013 Rogue (S35)
- 2011–2017 LEAF (ZE0) 2017 Rogue Sport (J11)
- 2010–2017 Pathfinder (R51/R52) 2014–2017 Versa Note (E12)

IF YOU CONFIRM
“Clicking” noise coming from either left or right front/rear CV-type axles during take-off/acceleration.

ACTION
Apply Molykote® M77 grease (P/N 44003-7S000) to the hub bearing surfaces.

NOTE:
- Do not remove the axle from the hub or transmission for this bulletin.
- Refer to the Electronic Service Manual (ESM) for model-specific torque specifications.

IMPORTANT: The purpose of “ACTION” (above) is to give you a quick idea of the work you will be performing. You MUST closely follow the entire Service Procedure as it contains information that is essential to successfully completing the repair.

Nissan Bulletins are intended for use by qualified technicians, not ‘do-it-yourselfers’. Qualified technicians are properly trained individuals who have the equipment, tools, safety instruction, and know-how to do a job properly and safely. NOTE: If you believe that a described condition may apply to a particular vehicle, DO NOT assume that it does. See your Nissan dealer to determine if this applies to your vehicle.
SERVICE PROCEDURE

NOTE: The photos in this procedure are examples and may not look exactly like the vehicle you are working on.

1. Remove the front or rear (depending on model) wheel bearing Cotter Pin and Lock Nut from the axle.

NOTE: Do not remove the axle from the hub or transmission for this bulletin.

2. Push axle back to allow application of Molykote® M77 Grease.

3. Apply a moderate coat of Molykote® (P/N 44003-7S000) to the entire (front or rear) wheel hub bearing surface (see Figure 2).

4. Re-install the (front or rear) wheel bearing Lock Nut and Cotter Pin.
   - Refer to the model-specific ESM for wheel bearing Lock Nut replacement requirements and torque specifications.
   - For LEAF vehicles: Install the washer listed in the PARTS INFORMATION before installing the new Lock Nut.

IMPORTANT: Please see page 3 for important torque information on:
   - 2007-2017 Versa (Hatchback, Sedan, Note)
   - 2013 LEAF
IMPORTANT (for 2007-2017 Versa Sedan, Versa Hatchback, Versa Note only):

- Tighten the center Lock Nut to 180 N•m (18.4 kg-m, **133 ft-lb**) with a torque wrench.
  
  - If the center Lock Nut is tightened more than 180 N•m (18.4 kg-m, **133 ft-lb**), the clicking noise could occur.
  
  - If the center Lock Nut is tightened less than 180 N•m (18.4 kg-m, **133 ft-lb**), looseness could occur.
  
  - If the center Lock Nut is reused, the clicking noise could occur.

IMPORTANT (for 2013 LEAF only):

- Install the washer.

- Tighten the center Lock Nut to 121 N•m (12.3 kg-m, **89 ft-lb**) with a torque wrench.
  
  - If the center Lock Nut is tightened more than 121 N•m (12.3 kg-m, **89 ft-lb**), the clicking noise could occur.
  
  - If the center Lock Nut is tightened less than 121 N•m (12.3 kg-m, **89 ft-lb**), looseness could occur.
  
  - If the center Lock Nut is reused, the clicking noise could occur.

5. Test drive the vehicle to confirm the issue is resolved.

(1) Order from your local Parts Distribution Center (PDC).
(2) Refer to the Electronic Parts Catalogue (FAST or equivalent) for model specific part number.
(3) Refer to the applicable ESM for replacement requirements.

NOTE: P/N 44003-7S000 (Molykote M77 Grease) is considered a shop supply. DO NOT include it on your warranty claim.

CLAIMS INFORMATION

Submit a Primary Part (PFP) line claim using the following claims coding:

ONE SIDE

**Versa & Cube**
