DATE: January 13, 2017

SUBJECT: Genesis Solar Panel 12V Battery Maintainers (TSB# 17-EE-001)

Hyundai Motor America is conducting the following limited pilot evaluation program seeking dealer feedback.

Some Genesis G80/G90 will arrive from Ports with a Solar Panel 12V Battery Maintainer box located on the passenger floor. The solar panel is to be installed at PDI for use while vehicles are stored on dealer lots. Refer to TSB 17-EE-001 for installation instructions.

The solar panel is a supplemental action to the existing battery maintenance TSB 16-EE-002 procedures. It can be used to help maintain 12V battery health while vehicles are stored on dealer lots. The shelf life of the solar panels can last up to many years with great care and consideration for the battery cables.

The solar panel will remain property of dealers and to be removed at point of sale. The unit can be applied to other Genesis vehicles at PDI or in vehicles at the dealer lots that don't have a solar panel. The panels are NOT to be provided to customers. It is recommended they are removed prior to test drives and reinstalled upon return to dealer lot per TSB 17-EE-001.
