SLIDE-N-SEAL™

DEXTER SLIDE SYSTEM

SUPERIOR DESIGN THAT'S ENGINEERED TO LAST.

WHAT IS A SLIDE-N-SEAL™ SLIDE SYSTEM?

The Slide-N-Seal™ wall mounted electric slide-out system is a sleek lightweight, easy to assemble system which has a very low profile design and consumes minimal space in your unit. The gear reduction motor and rail are designed to quietly extend and retract your room for years to come.

SLIDE-N-SEAL™ SLIDE SYSTEM

- **Improved Seal and Water Resistance** - Keeps water from being routed into the coach when on uneven ground.
- **Wire Protection** - Harness internally routed for protection vs. some competitive designs that have a tendency to detach.
- **Light Weight Aluminum Construction** - Lower GVWR and increased cargo carrying capacity versus cable drive system.
- **Easy Installation** - Can be installed off line, saving time and money. Once the Slide-N-Seal™ is installed into the box, the final step would be to slide in and secure.
- **Simple System Design** - The Slide-N-Seal™ system is pre-assembled, which results in fewer SKU's to manage and lower inventory. No need to install or adjust complicated cables.
- **Concealed Motor Design** - Easier to install, lower noise during operation and eliminates any need to hide ugly chains.
- **System Monitors Motor Output** - Controller stops slide-room before damage can occur.
- **Simplified Controller Design** - No need to undergo complex calibration following installation, unlike other similar products in the market.
- **Two-Year Limited Warranty** - Reliable product support; system tested to last years past the average life of an RV.
