15” hose length for MTIS kits installed on 19.5” 10-hole aluminum wheels used on trailer axles. PIL#647

Date: 9/21/2017

Subject: 15” hose length for MTIS kits installed on 19.5” 10-hole aluminum wheels used on trailer axles.

Models: All MTIS part numbers

Product Information Letter #647

9/21/2017

Meritor is pleased to announce the availability of a new tire hose length as an option to all MTIS. kit part numbers to be installed on trailers equipped with 19.5” 10-hole aluminum wheels for dual tire applications.

The new optional length, which is only required when the inside wheel in a set of duals is a 10-hole aluminum, ensures proper fit up of the tire hose to the rotary union (“thru tee”). This helps prevent contact between the hose and the wheel.

Properly installed tire hose does not touch the wheel

This new option is available in all MTIS kit part numbers containing the “-15” suffix, e.g. 31975-22-15. The hose is also available for replacement purposes in the aftermarket as part number 31373-15.

If you have questions concerning the 15” hose or the ordering process, contact your OEM account manager, your customer service representative or OnTrac at 1-866-668-7221 (OnTrac1) for assistance, or for online access to our product technical and training information, visit the Meritor Literature on Demand site at www.Meritor.com/lod or the Meritor Bullpen at www.meritorbullpen.com.
