

## Navigation Shows the Wrong Location

### AFFECTED VEHICLES

2017 MDX with Navigation

We're currently looking at an issue where the navigation icon wanders or shows up in the wrong location. It happens when the vehicle is started after it's been sitting for more than 4 hours, and is put into gear within 15 seconds.

If you get a vehicle in your shop for this, be aware there's nothing you can do about it at this time. So, don't try replacing any parts; it won't make a difference.

For now, we're asking the service consultant to have their client wait 15 seconds before putting the vehicle into gear if the vehicle has been sitting for more than 4 hours. We'll let you know once we have a fix for it.
