

No.: 17 TL-25

TO: Service Locations

December 1, 2017

FROM: Service Systems Development

SUBJECT: TruckCam™ Alignment System

GENERAL INFORMATION

DTNA Special Tools group has approved the use of TruckCam aftermarket alignment systems for use on DTNA products at DTNA service locations. The TruckCam system allows DTNA service locations to return a truck to factory alignment specs using the same brand of equipment used at DTNA factories. The TruckCam system is quick to set up and provides accurate, repeatable measurements using the same frame-referenced method that DTNA factories use.

TruckCam is a global brand owned by Snap-On™ and is in use at Daimler manufacturing and axle plants worldwide.

TruckCam Aftermarket Alignment System

INSTRUCTIONS

All user instructions are included in the purchase of TruckCam tools. Further information can be obtained from TruckCam.

FEATURES

- Tested by DTNA and approved to return DTNA trucks to factory alignment specs.
- Enough wheel adapters to align a six-axle truck at one time without removing wheel adapters.
- Frame-referenced measurement system.
- Ability to align smaller vehicles with the purchase of smaller wheel adapters.
- Ability to align any commercial vehicle.

WARRANTY INFORMATION

The TruckCam alignment system is warranted through TruckCam. For all TruckCam warranty services, see contact information below.
