Storage Rack Bracket Improvement

Dear Valued Customer:

Please be advised that Lippert Components intends to transition its Storage/Bike Rack Bracket to an updated version with improved hole dimensions. The outside diameter of the holes will change from .530" to .515" and the center hole location in relation to the outside holes is offsetting by .060" (please see Fig. 2). This improvement will help with the hole to pin tolerances that allowed for a potential "droop" or "sagging" of the rack in the previous version.

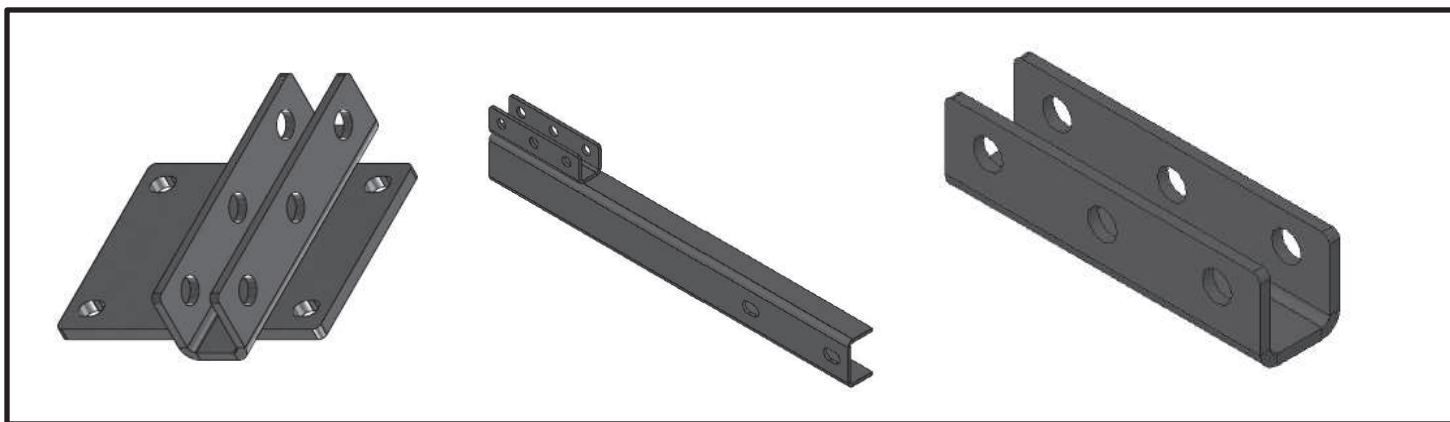

Figure 1: Various attachment options for Storage Rack Bracket

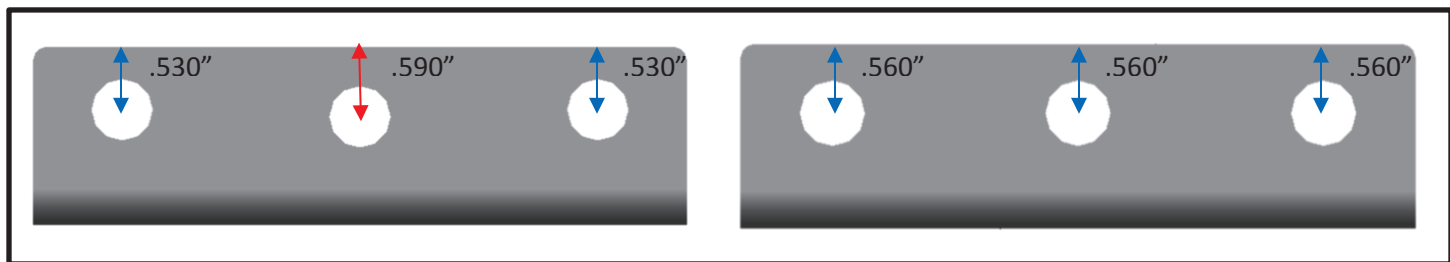

Figure 2: Above left is the new and improved version of the Storage Rack Bracket. Above right is the old version that is being phased out of production.

There will not be a price change associated with this change. There will not be a part number change, the existing part number is 433159 and will be revised. If you are buying this item in as part of a kit, the kit part number will not change. We intend to make this change on a running change basis.

We appreciate your business and thank you in advance for your time and attention to this matter. If you have any questions or concerns, please do not hesitate to contact myself or your sales representative.

Sincerely,

Trenton Miller

Chassis Product Manager

Frequently Asked Questions:

- 1) Is the original part still available for purchase? No. It is our intention to move to the improved bracket on a running change basis.
- 2) Is the new part interchangeable with the previous version of the part? Yes.
- 3) Will a new part number be required? No, the existing part is being revised. Kits with the bracket included in them will also keep existing part number.
- 4) Does the customer need to replace inventory? No.
- 5) Does the price change for the item or sub-items? No, the price shall remain the same.
