FROM: Service Systems Development

SUBJECT: **DT12 PTO SERVICE TOOL KIT DK1012T16004**

GENERAL INFORMATION

The DT12 is now available with a rear-mounted PTO, and requires two new tools. Both tools are included in this kit, (Fig. 1). The first is a two-piece seal driver for the output shaft. The second is one pair of clamps that are used to determine the oil pump shim required when removing, replacing, or up-fitting the PTO on the transmission. The clamps are also available separately, as DDE DSN012T16003 (one pair of two clamps per package).

Benefits of the kit

- Sets the depth of the seal correctly
- Guides the seal lip into position
- Clamps the oil pump, so the gap can be measured

What the kit contains:

1. Seal driver and ID guide.
2. 1 pair of oil pump clamps.
