Subject: Field Repair 11151: Steering Column Mounting Bolts Loose

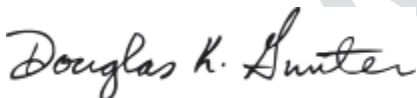

Dear Peterbilt Customer,

Peterbilt has determined that the steering column mounting bolts installed on your vehicle may be loose. These bolts require inspection and potential replacement of bolt fasteners.

The chassis numbers listed by VIN on back side of this letter require repair by an authorized dealer. We would like the opportunity to perform this repair. Please contact a Peterbilt dealership to schedule an appointment for this work. You can find the nearest Peterbilt dealer at Dealer Locator on the website www.Peterbilt.com.

When contacting your selected Peterbilt dealer, refer to campaign **11151** and the VIN listed on the back side of this letter. The repair will take approximately **2 hours** and there will be no charge to you if completed within Standard Warranty (excludes Extended Warranty) or for repairs completed by **03/29/2017**, whichever is greater. We apologize for this inconvenience but ask for your cooperation to ensure continued satisfaction with Peterbilt products.

Thank you,

Doug Gunter
Director of Warranty
Peterbilt Motors Company
