In the ARC pre-series training video for the next gen Cascadia, they claim one of the slides is a hyperlink to the wall chart for the new single SAM, which there is no hyperlink. They also say that it can be downloaded from DTNA solutions. I haven't been able to find it anywhere. has anybody else searched for it or found it?

If I remember right type in sam wall in the search box on dtna solutions there should be a solution about that. If you can't find them email me and I'll send them to you

I was referring to what they claimed was a hyperlink on the slide itself in the training video, not the 2 links here. I meant the wall chart for the new next gen sSAM (single sam). I only asked under this particular solution because this was all I was able to find for SAM wall charts. But these are the wrong SAM's, I already have these.

have you tried service pro? I printed out the fuse, relay and connector locations from there. I don't believe it is in the TM sections. might be in section 54.

These wall charts state that they are for EPA 2010 models. Is there any that are applicable for the EPA 14 models?

Chaz\_Trimble

10-10-2016 04:39 PM

Its for EPA 10 and up until the new cascadia.

Refer to Service Solution 1032985. It describes how to order the New Cascadia wall charts, however, the older wall charts are listed on the Publications Order Form.
