

SSM 46497	2017 F-Super Duty vehicles built on or before 22-Feb-2017 may have timed 12 volt auxiliary power points that disable when the ignition is turned off and a door is opened. Power points are timed with the exception of the one located on the rear of the center console, if equipped. Timed power points should remain on for 30 minutes when in accessory mode and 75 minutes when ignition is turned off. To correct this condition, reprogram the body control module (BCM) to the latest calibration using IDS release 104.04 or higher. Make sure you are connected to the internet when entering module programming to obtain the latest updates. Calibration files may also be obtained at www.motorcraftservice.com . For claiming, use causal part 15604 and applicable labor operations in section 10 of the service labor time standards (SLTS) manual.
