All,

As you all know we made the change to SKF wheel seals on all axles as part of the 2018 model change. We also incorporated updates to our installation process and are expecting significant improvement on performance from the wheel seals.

With the change in seal and installation procedures we ask that you inspect the seal for leakage. When the seal looks like it might be “moist” in many cases that could just be the oil we apply to the seal during the installation process. The only seals that should be replaced are the seals that are truly leaking. Do not change out all seals on a trailer because one or more have failed. Only change the seals that we believe have truly failed.

When you find a seal that you believe has failed please immediately contact Warranty at David City and immediately return the seal. You will not be reimbursed for the repair until Warranty receives the failed seal back.
