**Subject:** ShoreLand'r Pontoon Bunk Fastener Bulletin  
**Attachments:** PONTOON LAG BOLT INSTRUCTION.pdf

**Importance:** High

Our pontoon trailer bunks are being shipped with a new lag bolt.

This is a longer, more robust bolt with a lag-type thread, resulting in deeper penetration and a more aggressive hold.

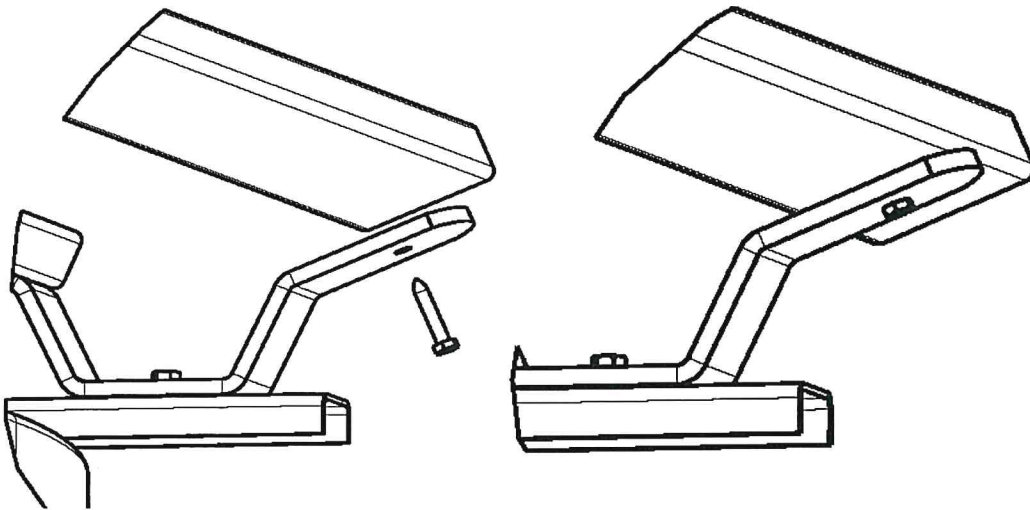

This change is due to reports in the field of bunks loosening during dry loading.

Even with this improved lag bolt, it's imperative that this fastener be applied as straight as possible per the attached instructions.

Sincerely,

Doug Clough  
Customer Service Manager  
ShoreLand'r Boat Trailers

**New Lag Bolt for Pontoon bunks.** This should be inserted as straight as possible which will improve the bolts ability to hold the bunks more securely. By doing this will give the lag bolt better holding strength by creating more even contact between the components with the head of the lag bolt flat against the bracket.
