

Driver's Power Mirror Not Working and/or Working Oddly; Rearview Mirror Not Dimming

AFFECTED VEHICLES

2017 Clarity Electric

We're looking at an issue of the driver's power mirror not working and/or working oddly. It's been reported, for instance, that when adjusting the driver's power mirror, the passenger's power mirror may respond instead.

Furthermore, this issue can also include the rearview mirror not dimming.

If you get a vehicle in for this, check the C9 (7.5 A) fuse in the driver's kick panel fuse/relay box. If it's blown, call Tech Line for further instructions. If it's OK, then continue with normal system troubleshooting.
