RE: Coolant Level in Radiator Condenser Tank During PDI – 2018 Eclipse Cross
TIN NO. TIN-18-14-001REV

.....

This TIN is being revised to update the coolant level measurements. Revisions are *italicized*.

AFFECTED VEHICLES: 2018 Eclipse Cross

PURPOSE

During production of the Eclipse Cross, the coolant level is filled above the “Full” level mark of the radiator condenser tank. The coolant level is expected to be normalized after several heat cycles of the engine. **Do not reduce the coolant level in the radiator condenser tank** at PDI if the level is within *25 mm (approx. 1 inch)* of the “Full” mark.
