Star Venture / Star Eluder; Saddlebag Cleaning at PDI

Introduction

On certain initial release Star Venture and Star Eluder motorcycles, some overspray dust left over from the painting process during manufacturing may remain on the inside of the saddlebags. To ensure maximum customer satisfaction, remove any residual dust during PDI process using the below procedure. These are flagship products for Yamaha and your Dealership; they should be delivered to the customer in the best possible condition.

Procedure

At the time of assembly and PDI, wipe the inside of the saddlebags using a soft towel or rag with a mild soap-based detergent and water. If overspray still remains, use isopropyl alcohol or a parts cleaner/solvent that is suitable for plastic painted parts. Read the product's label and verify it is suitable for surfaces being cleaned before use. Take precautions to ensure the painted surface on the exterior of the saddlebag is not damaged in the process.

Star Venture / Star Eluder; New PDI Sheet

As a reminder, there is a new Star Venture and Star Eluder specific PDI form which should be used in place of the standard motorcycle PDI form for these models. A Star Venture-specific PDI sheet was sent in August to all motorcycle dealers who had ordered one or more Star Venture models enclosed within a packet of materials including the assembly manual, quick start guide*, supplemental assembly checklist, and Yamalube Advantage brochures. These materials are also located on YDS. Additional PDI sheets can be ordered using part number LIT-11161-01-07. The PDI sheet has recently been updated to include the Star Eluder; the part number is unchanged.

* Quick start guides are available to order using part number:
LIT-11626-31-56
