CONDITION

In the event that injector seal repair is required on vehicles equipped with a direct injection fuel system, a Special Service Tool Set is required to properly install the seal onto the injector. As new vehicle configurations have been released, several injector seal tool sets have been distributed to accommodate these new vehicles. There are a total of two injector seal tool sets for Scion models, located in the appropriate SST cabinets. Each kit contains multiple pieces as shown in the diagram below. The individual pieces must remain together to ensure these tools are used correctly. Refer to the repair manual for the tool information to ensure the correct tool is used for the desired application.

RECOMMENDATIONS

Reference the table below for an overview of each injector seal tool set.

Injector Seal Tools					
Make	Scion				
Kit Part Number	49 D013 1A0			09260-39021
