

SSM 47007	<p>The EV Range after fully charging a Focus Electric, C-MAX/Fusion Energi may vary after each charge event. The window sticker indicates 0-20 mile range for C-MAX Energi, 0-21 mile range for Fusion Energi. Variation of EV range may not indicate a battery or charging concern. EV range is similar to the DTE display on gasoline vehicles, EV range will vary with driving/operating conditions. Conditions include: extreme outside temperatures, terrain, driving style, city or highway driving, tire pressure, and use of accessories. If the customer replaces the low roll resistance tires with a more aggressive tread the range will suffer. Using the cabin heater and A/C, which are electric, will also decrease EV range. To temporarily remove the impact of driving/climate history , reset the Driving History/Lifetime Summary by using the Settings menu on the left side of the instrument cluster, under Display</p>
