Star Venture / Eluder— USB Flash Drive Card

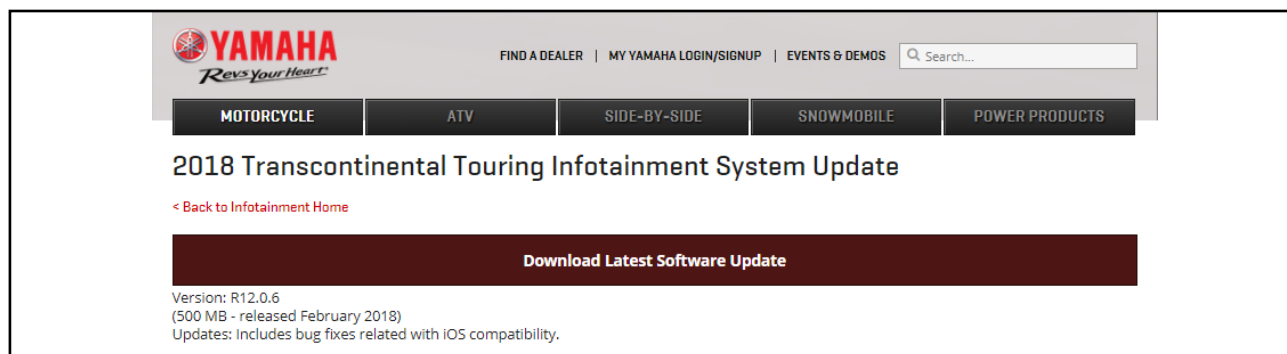

Yamaha has developed a convenient, "credit card" type USB flash drive that is specifically designed for use when updating the infotainment software or navigation maps on Star Venture and Star Eluder motorcycles.

One of these card style flash drives is being mailed free of charge to your dealership and also to all registered Star Venture and Star Eluder customers for their use should they choose to perform their own software or navigation updates. To access the USB flash drive in this card, simply fold it out to reveal the connector. Always use the USB port located inside the front right pocket on the motorcycle to perform software updates.

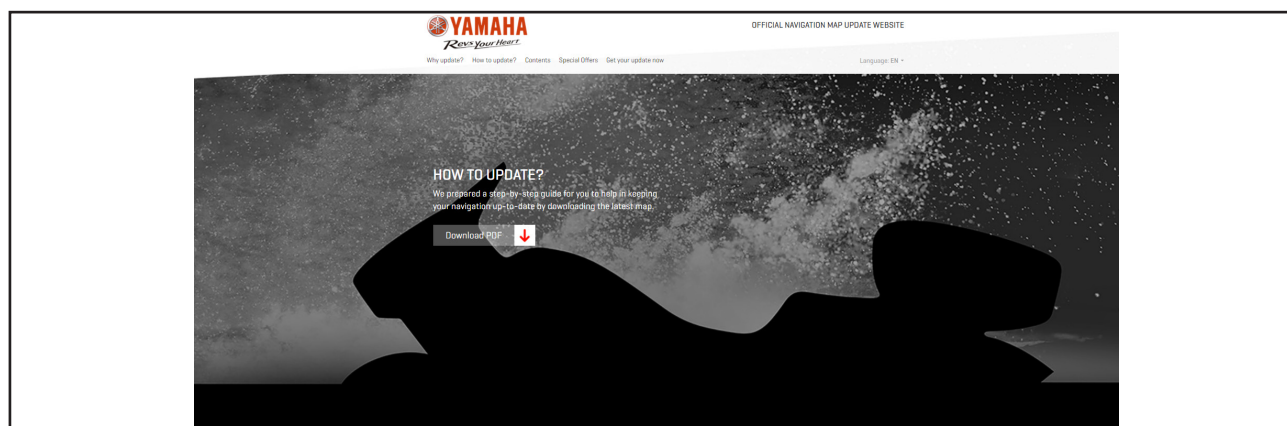

Should a card be lost or damaged, contact your RTA for replacement information (customers can contact Yamaha Customer Relations).

For the latest update of the motorcycle's infotainment system software, visit the Yamaha Motorsports webpage at <https://www.yamahamotorsports.com/transcontinental-touring/pages/infotainment-software-update> and follow the instructions on this page to download and update the software. Instructions for updating the Infotainment software are also located in Tech Exchange M2018-003.

For the latest update for the motorcycle's navigation map data, visit <https://www.yamaha.naviextras.com> and follow the instructions on this page to download the Yamaha ToolBox program and update the map data.

Star Venture / Eluder— "Navigation Not Ready" Restoration Procedure

Each time the main switch is turned on and the Infotainment System boots, the display will show the "Navigation is not ready" message until satellite signal is acquired on models equipped with the navigation system option. If the system is permanently displaying this message, follow these steps to restore the Navigation to working order.

1. Turn the main switch ON and wait for the infotainment system to boot.
2. Select: *Menu > Navi > Destination* and enter a new destination (easiest to choose a pre-stored waypoint such as a gas station or restaurant.)
3. The Navi system will ask if you would like to navigate to the new destination by way of the previous address.
4. Choose the arrow above the previous address and allow the system to recalculate the route. This may take up to 15 minutes.
5. Once the route has calculated, you will see the route options and the "GO" button. Select "GO."
6. The system will display all of the waypoints in the route. Now delete the old address from the route. The system will again recalculate.
7. Once recalculation finishes, select: *Menu > Navi > Quit Guidance*.
8. The system is now restored to working condition.

TIP: There are 3 ways to enter a new destination.

- Touch screen
- Left handlebar switch
- Voice Command using a helmet headset.

If the navigation system displays the "Navigation is not ready" message and the Navi icon is not available (grayed out), try using an alternate method of entering the destination such as using voice commands with a helmet headset.

TIP: A video demonstrating this restoration process is located on the Yamaha Technical Academy YouTube® Channel at the following address:
<https://Yamaha.us/StarNavi>.
