RE: Product Update: 2017 Civic Type R Turbocharger Control Solenoid Valve Circuit

Today, June 26, 2018, American Honda is announcing a Product Update for certain 2017 Civic Type-R vehicles due to the possibility of the MIL coming on with the message **Rev Match System Problem / Emissions System Problem** on the MID. A dealership with any new or used units in inventory must repair all affected, unrepared units according to the service bulletin prior to sale. Do an iN VIN status inquiry to determine if any vehicles in your inventory are affected.

**Basic Problem**

The affected vehicles may have the MIL illuminated with the message **Rev Match System Problem / Emissions System Problem** on the MID. This will not cause any drivability issues but the REV Match system will not work. This failure is due to an open circuit in the turbocharger bypass control solenoid valve connector, caused by heat and coupler wire oscillation from the natural frequency of the harness.

**Campaign and Repair Information**

Replace the factory-installed engine harness with the countermeasure engine harness kit. Details are provided in service bulletin 18-044, *Product Update: 2017 Civic Type R Turbocharger Control Solenoid Valve Circuit*, which has posted today to the Service Information System (SIS).

**Parts**

Parts are available through controlled parts order.

**Tools**

No special tools are needed for this repair procedure.

**Warranty**

Detailed warranty claim information is available in service bulletin 18-044.

**Customer Notification**

American Honda expects to start initial customer notification by the end of July 2018. Honda Automobile Customer Service will also assist with dealer and customer appointments.

As always, please be sure to do an iN VIN status inquiry to determine if a particular vehicle is eligible for this or any other proactive campaigns.
