Subject: 488 Challenge Technical Regulation Update – New Minimum Weight

We would like to inform all Challenge teams that with reference to Article #3 of the Technical Regulation EU_2018, a new minimum weight has been defined and the new value changes from 1475 Kg to **1490 Kg**.

The updated minimum weight value has been modified to better balance the different driver weights collected during previous events.

The minimum weight includes driver weight (including clothing, HANS device, and helmet) and car weight (all lubricants and liquids, without fuel, in a single driver seat configuration).

The maximum ballast weight that can be applied in the dedicated passenger footrest area is 30 Kg which includes all components of the ballast installation kit, ballast weights for handicap and tools for the video logger the organization requests to assemble on top of the handicaps.

All cars in the North American series must be in compliance with the new minimum weight regulation to participate in the last event of the season, the 2018 World Finals.

Please refer to the 458 Challenge Technical bulletin n° 007 for the correct assembling procedure of the ballast kit.

Thank you for your co-operation.
