## Product Improvement Notice - Axle lock nuts with wax coating

Dear Valued Customer:

Please be advised we are making an improvement to our axle lock nuts (PN 122103) to add a wax coating. The wax coating is a sealer with an integrated torque modifier (it acts as a lubricant) to further enhance the fastener coating and assist with the installation of the nuts.

Other than facilitating installation, there is no change in fit, form or function with the new wax-coated nut, and all LCI installation instructions and torque requirements remain applicable.

There is no price change associated with the product improvement and the part number will not change.

**Current nut, left, new wax-coated nut, right. As you can see from the above photos, there is no discernible visual change to the nut.**

LCI intends to make this change on a running change basis effective immediately. If you have any questions, please feel free to call me directly or your LCI representative. We value and appreciate your business and partnership.

Sincerely,

**Brian Hess**
