Product Change Notice - Electric leveling bolts

Dear Valued Customer:

LCI intends to make another improvement to its environmentally exposed products to improve corrosion resistance.

This improvement pertains to the mounting bolts for our electric leveling jacks (**Fig. 1**). Currently, the electric leveling bolts have a zinc coating with salt spray resistance exceeding 50 hours. We intend to improve the bolts on or around 08/27/18. At this time, we intend to improve the corrosion resistance and utilize bolts coated with zinc flake with Magni 567 topcoat to increase the salt spray resistance to 1,000 hours. We previously made the same change to our hydraulic leveling bolts.

In (**Fig. 2**) are a current production bolt (left) that will move to the zinc flake with Magni 567 topcoat with salt spray resistance of 1,000 hours (right).

We will make the change on a running change basis. There will be no part number change and no price increase associated with this improvement.

If you have any questions, please feel free to reach out to me directly or your LCI representative. We thank you in advance for your time and attention to this matter and appreciate your business and partnership!

Sincerely,

Brian Hess

Frequently Asked Questions:

- 1. Is the original part still available for purchase?** Yes, the original parts are still available for purchase. However, once the changeover occurs, the bolts will be coated with zinc flake with Magni 567 topcoat (on or after 8-27-18). The old zinc versions of the assembly bolts will no longer be utilized when the improved corrosion resistant bolts are utilized in their place.
- 2. Is the new part interchangeable with the previous version of the part?** Yes.
- 3. Will a new part number be required?** No.
- 4. Does the customer need to replace inventory?** No.
- 5. Is there a price change associated with this improvement?** No.
