

## Brake Pedal Kicks Back During Engine Start

### AFFECTED VEHICLES

Year	Model	Trim	VIN Range
2017-19	CR-V	ALL	ALL

Is your customer experiencing brake pedal kick back or pulsations during vehicle start up? This may be due to a battery that is in a low state of charge, which can cause the Electronic Brake Booster (EBB) control unit to reset. When the EBB resets, the brake pedal kick back may be noticed.

The best way to troubleshoot this problem is to test the battery. If the battery test determines a good battery, charge the battery completely. If the test is negative, replace the battery.
