

1. You have to remove the red key (chargeline disconnect) when you are storing the coach so the solar or alternator is not charging the house battery.

2. Check the 10 amp fuse (10 amp per panel) at the back of the Go Power for Plateau FL

3. Check the wires that go to the Go Power: check the lengths of the wire using the guide jig on the back of the Go Power (picture 1&2 below)

4. Check the 30 Amp Fuse by the lithium battery (with green wire labeled "solar panel" FUSE)

5. Check the connection on the black plastic "ENTRY PLATE" above the solar panel on the roof. Check if wires are zip tied very tight this can cause power issue.

6. Could be a bad Go Power controller

7. Could be a bad solar panel

8. Contact Go Power 866 247 6527 / 250 380 0052 for guidance.
