Product Improvement Notice - New bracket for bike racks

Dear Valued Customer:

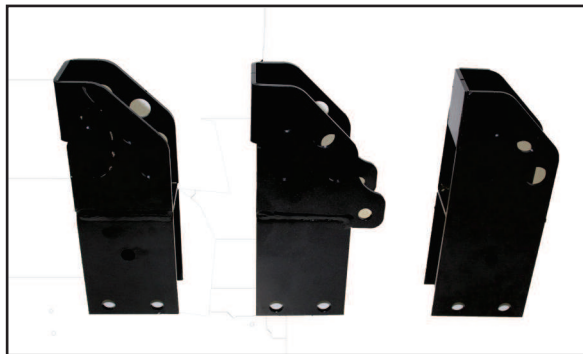

Please be advised Lippert Components is making an improvement to the brackets used on a variety of bicycle racks.

Bracket 719822 will replace brackets 369559 and 243632, which will become obsolete.

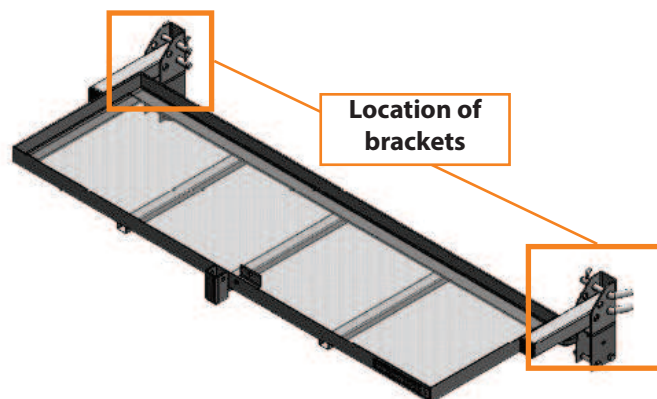

- 719822 (new) – Is now a three-piece weldment made with all plates
- 369559 (old) – Is a two-piece weldment made with formed parts (hereinafter XMCs)
- 243632 (old) – Is a two-piece weldment made with XMCs

The new bracket was designed for more efficient and accurate production. The three plates are set in a fixture, making the product more consistent than the welded XMCs.

There is no change in the way the brackets install and no change in fit, form or function with the product improvement. There is also no price change. The change will be made on a running basis, starting around Sept. 14.

From left are current bike rack brackets 243632 and 369559 and new bracket 719822.

If you have any questions, please feel free to call me directly or your LCI representative. We value and appreciate your business and partnership.

Sincerely,

Brian Hess
