Product Improvement Notice - Protective boot added to 300:1 In-wall® slide-out motors

Dear Valued Customer:

Please be advised Lippert Components is adding a boot to its In-Wall Slide-out System motors (PN 236575) for added protection from residual moisture and debris during storage, handling and installation.

The boot (Fig. 2) covers the top of the motor, protecting the internal mechanism. While the new boot provides added protection to the motor, the external storage and handling of the part should still be carefully monitored. The boot will not protect the motor against unnecessary or prolonged exposure to the elements.

There is no change in fit, functionality or serviceability with the addition of the boot. The boot remains on the slide-out motor during installation.

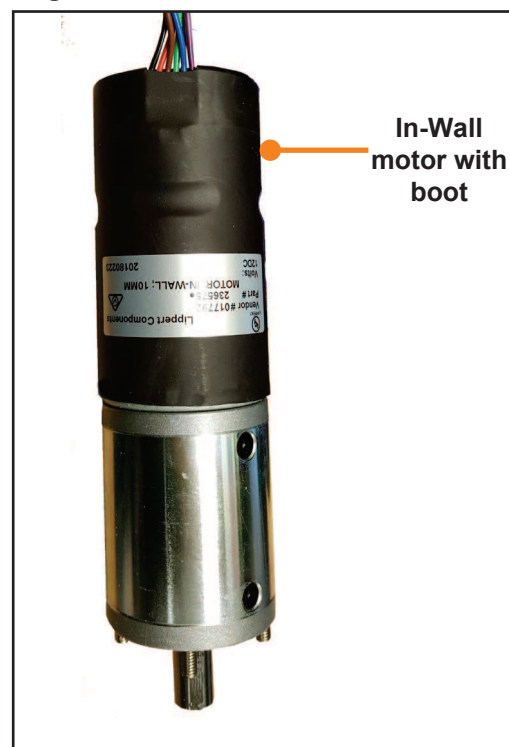

There is no part number change for the motor and no change to the motor itself, other than the addition of the boot. While there is an additional cost to LCI for the product improvement, there will be no price increase passed on to our customers.

We plan to make this change on or around Nov. 5.
