

Don't Refinish FNC Brake Discs!

AFFECTED VEHICLES

All models with FNC brake discs

Ferritic nitrocarburizing (FNC) brake discs are treated with a surface-hardening process that helps reduce brake disc wear and increase corrosion resistance. FNC brake discs are marked with the letters **FNC**.

If you see those letters, **don't** refinish the brake discs with a brake lathe; it removes the FNC treatment. If the brake discs are out of spec, replace them.
