

TPI SERVICE BULLETIN

Model:	Urus	Date:	12 October 2018
Model Year:	ALL	Group:	TPI_LB636.08.18
VIN Range:	ALL	TPI Description:	Flight mode deactivation for NAR market

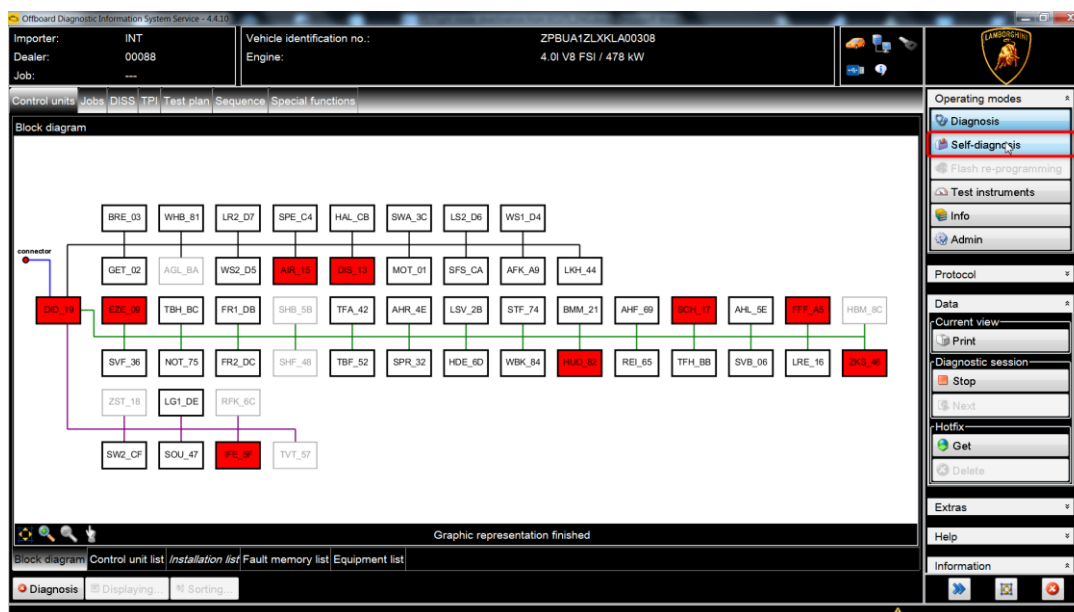

Object: “Flight mode deactivation, NAR market, backup procedure”.

Information to the field:

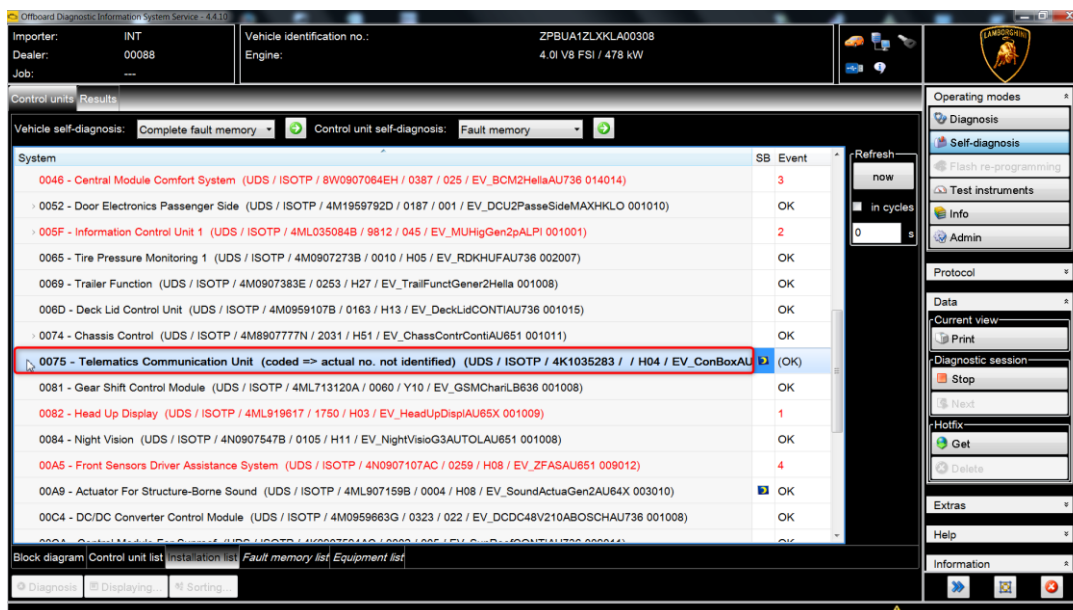

Due to a limitation related to the ODIS database, Lamborghini suggests to execute the procedure of flight mode deactivation in “Operating mode” of “Self-diagnosis”. This procedure is exclusively indicated for the Nord America market in which the conbox is fitted, ECU 75.

Field solution:

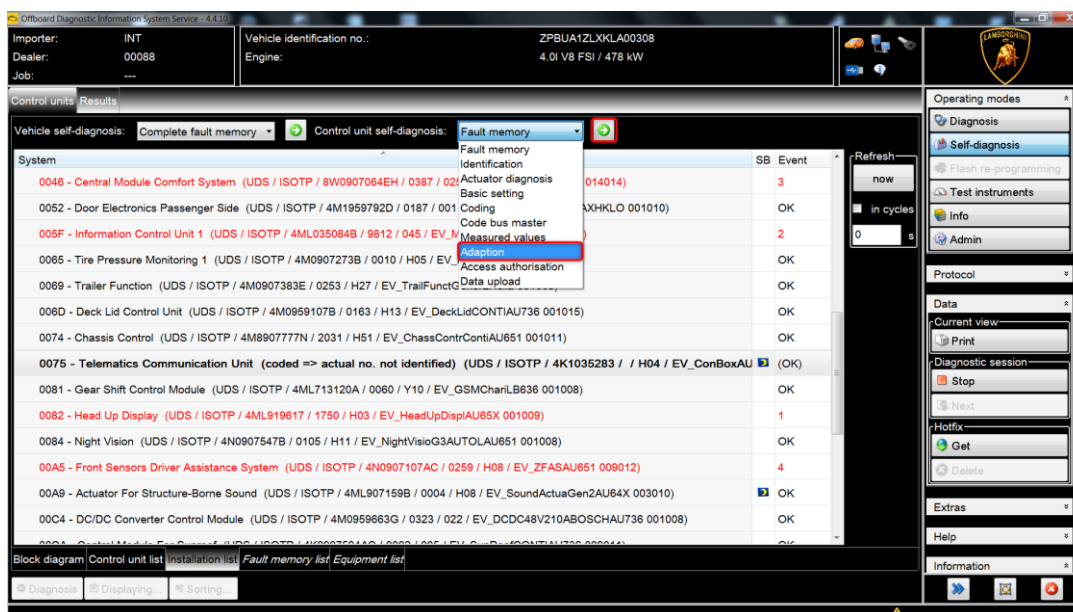

1. Access the operating mode of “Self-diagnosis” selecting the related tab in Odis.

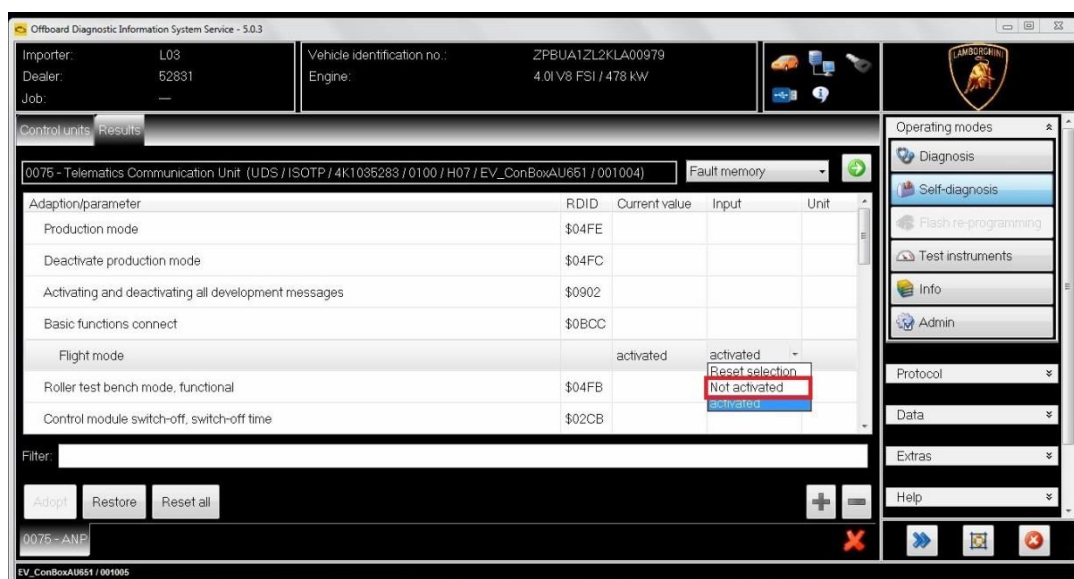

2. Select the control unit “75- Telematics Communication Unit” from the control unit list.

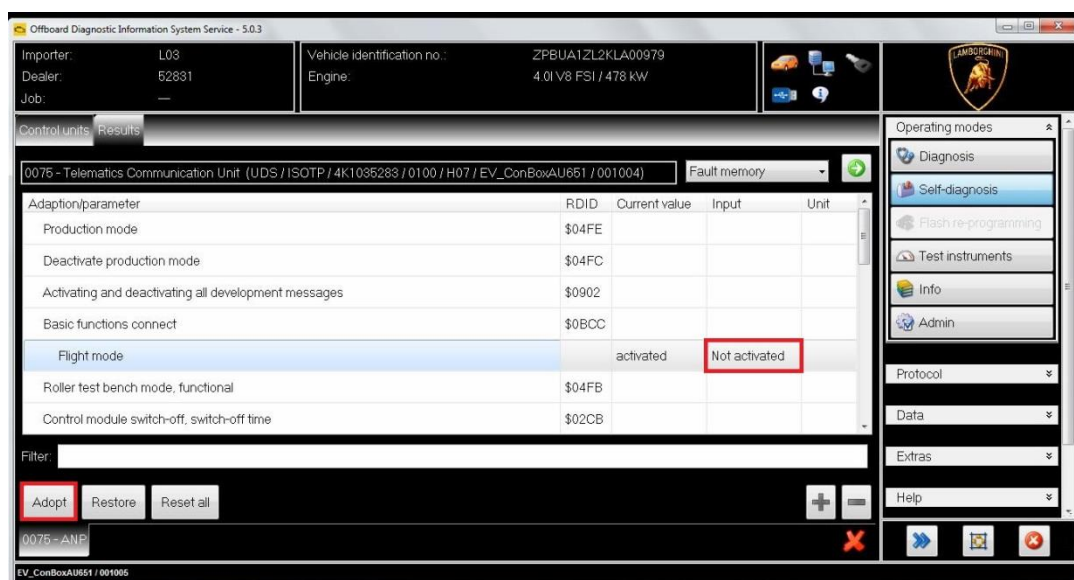

3. Select the Adaption row from the “Control unit self-diagnosis” and click the green arrow to run the function.

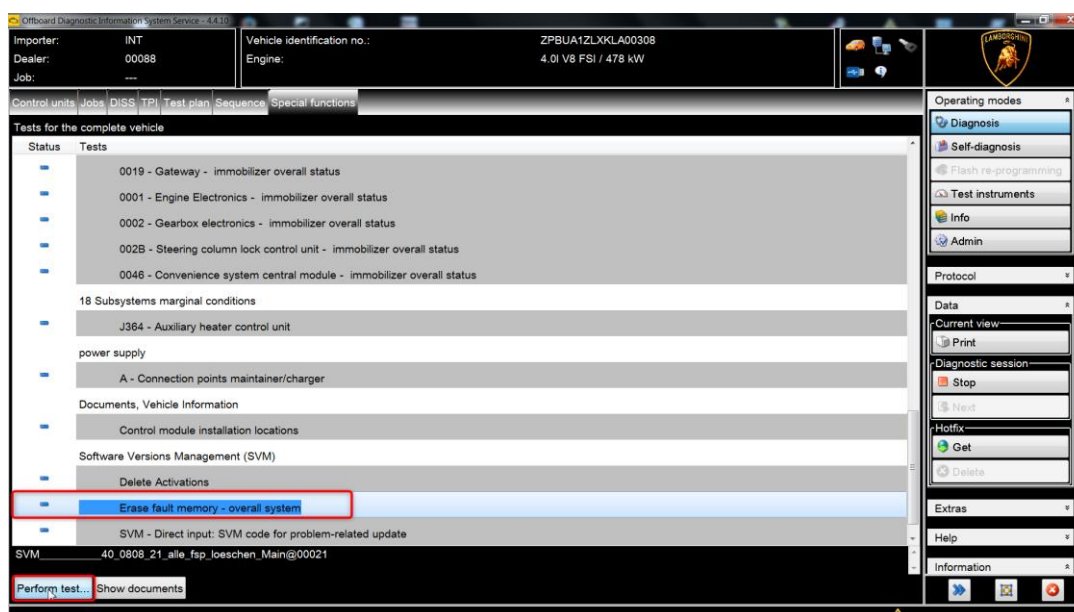

- Find the row related to the “Basic functions connect”, “Flight mode” and switch it from “Activated” in “Not activated” from the drop down menu.

- Select “Adopt” on the bottom left corner of the screen to perform the selected adaption.

6. Switch to the diagnostic session “Diagnosis” and then from the “Special functions” list select “Erase all fault memory – overall system”. The complete guide in order to erase all fault memories is available in the workshop manual, chapter **10.00. Deleting the data in the fault memory of control units**.

For any further information do not hesitate to contact your Area Manager or service.department@lamborghini.com.
