Section: 10

Subject: New “Suggested Customer Price List” and “Priced Shopping Basket” Features

New features have been introduced to the Technical Documentation **Spare Parts Catalog** section in **New Modis** that will allow you to view the **Suggested Customer Price List (before VAT or other taxes)** for the spare parts and create a **Priced Shopping Basket**.

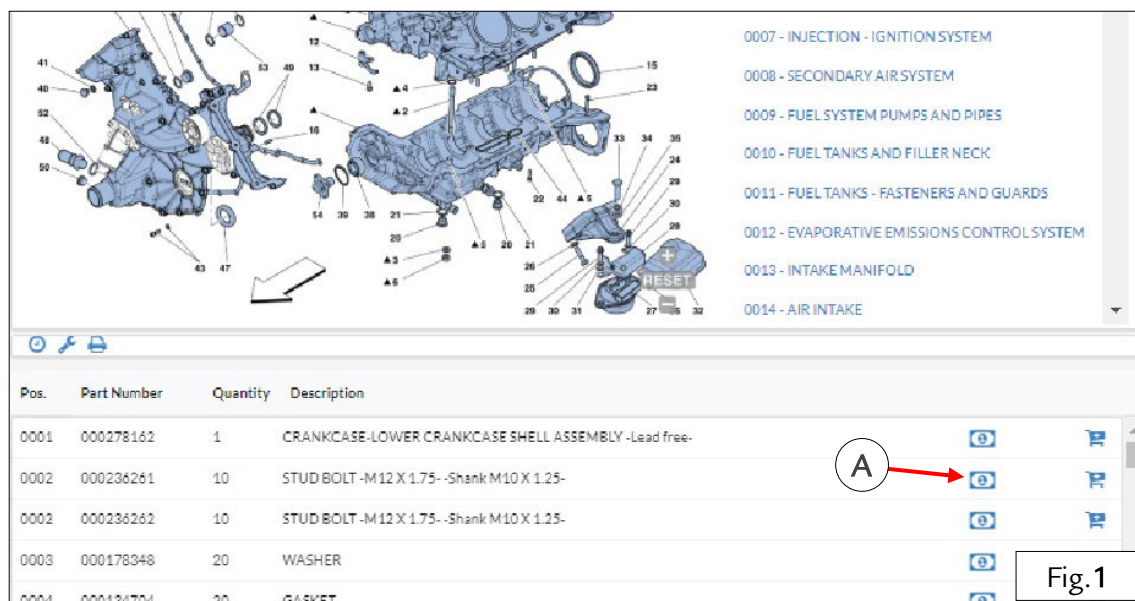

- IMPORTANT -

Please note the official reference for the Price List is always the Price List Query on New Modis.

The goal is to provide a tool that can quickly create a **Priced Spare Parts Order** which can then be exported in Excel format to be shared or “CSV” to be imported into **New Modis**. The basket may contain spare parts for several models at the same time and each of these has a quantity field. Instructions on how to use the new features are given below.

“Suggested Customer price list (before VAT)” function

The “” icon (A) has been added for every part in the **Spare Parts Catalog**. Clicking with the mouse on the icon (A) the relative **Suggested Customer price (VAT and other taxes excluded)** will be shown, in the user’s currency - Fig. 1.

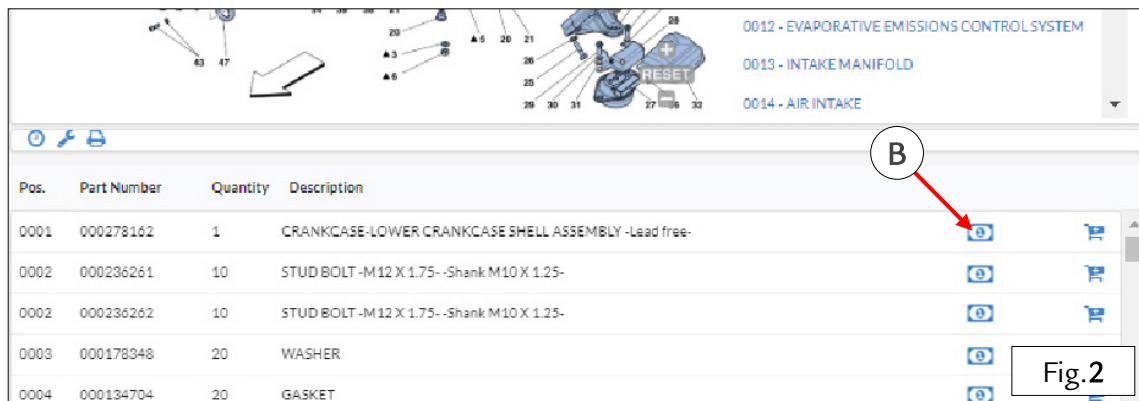

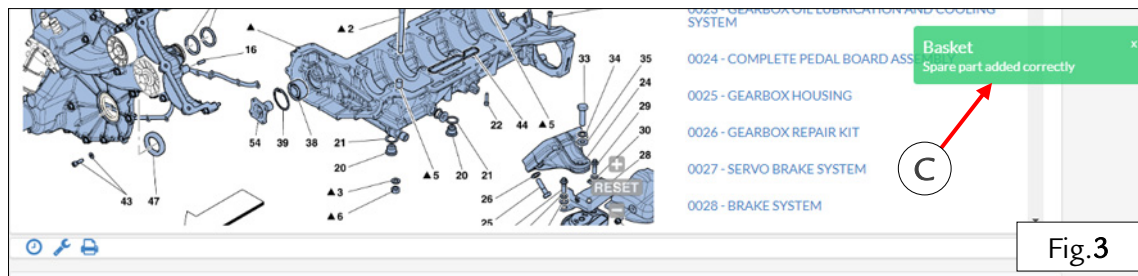

Ferrari North America

“Priced Shopping Basket” function

- By using the special button  (B) in the **Spare Parts Catalog**, you can add the relevant items to the **Basket** – Fig.2.

- When button  is pressed, a confirmation message is displayed (C) - Fig.3.

Ferrari North America

- Once you have selected all the items you want, you can display the **Basket** contents by clicking on button (D) – Fig.4.

Version: USA Latest Update: 2018-10-17

Inserting an order from an Excel CSV file

An order can be created by importing a **CSV** file previously generated by the **Basket**. To do this, click on the drop-down menu indicated in Fig. 6.

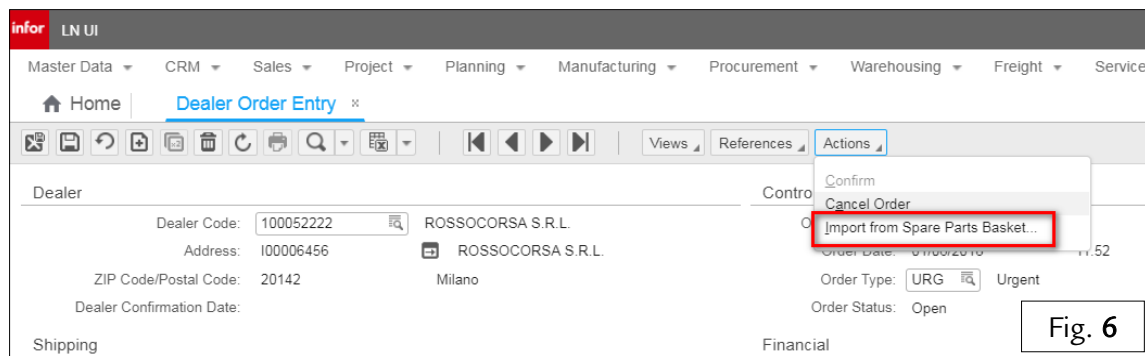

Fig. 6

Click on “**Import from Spare Parts Basket**” to open the Import session (Fig. 7).

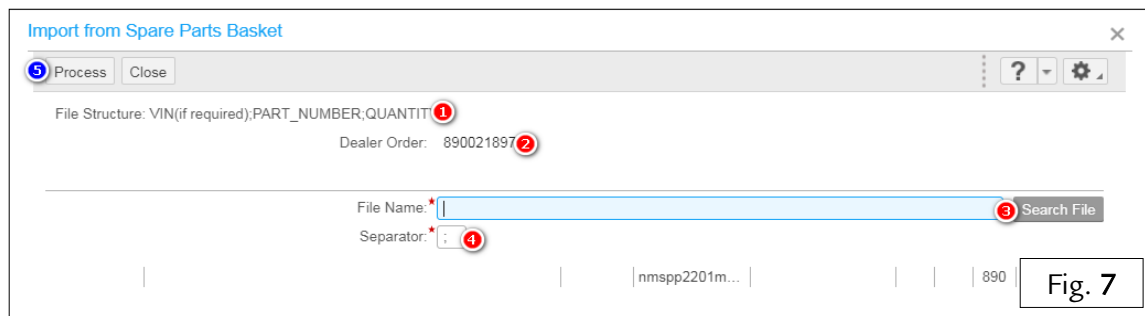

Fig. 7

The Import window contains the following main information:

1. File structure: the file must have the same format displayed in the session: VIN (if required); Part Number; Quantity;
2. Order number (as displayed);
3. Click on “Search File” to select the file (.txt or .csv) from a specific folder on the PC;
4. The default separator is “,”. Users can modify it according to the separator defined in the file;
5. Click on the “Process” button to start loading the lines and perform the same checks used when manually inserting an order.

Ferrari North America

At the end of the process, the program will create a report with results for the individual lines and any additional information or errors (Fig. 8)
