

Here is the procedure to fix the leak:

1. Look for any pin holes.
2. Clean off silicone by the pin holes or close to the leak area.
3. Once old silicone are cleaned, apply silicone inside and outside around the base where the yellow lines on picture 1 (OUTSIDE) & picture 2 (INSIDE) below.
4. Dry silicone for 12 hours. Silicone cannot be wet during the 12 hours.

Note: It's very important to clean the old silicone on the area where the pinhole or where the leaky area is before applying silicone.
