

If you look at the sticker and the OCCC states 414kg, meaning that is the total weight that you can put inside the coach (this includes people, food, fresh water, clothing, etc.). You cannot exceed that weight or else you will go over the GVWR. You really need to maximize the weight that you are putting inside the coach. If you are going to a campsite that has water hook-up, then you do not need to fill the fresh tank to lessen the weight that you are putting inside.
