PAB1081: SCREAMIN' EAGLE UPDATES

Purpose for Parts and Accessories Bulletin

To inform dealers of Screamin' Eagle® Pro Street Tuner software changes related to Stage II for Trike models and Smart Tune PRO improvements.

Markets Affected

U.S. and Canada markets only.

Summary and Parts Affected

Stage II Torque - Trike

Stage II Torque kits are now approved for use in Trike models:

- 2017 & 2018 107 in³ Trike models - Stage II Torque available for 50-state use.
- 2019 114 in³ Trike models – Stage II Torque available for 49-state use.

Exceptions: Stage II is not approved for use in 2019 Trike models in California.

NOTE

The Screamin' Eagle team focused efforts on the Stage II TORQUE rather than the Stage II POWER application given the torque-focused performance needs for the Trike customers.

Smart Tune PRO – Automatic Tuning Module – Calibration updates:

The Screamin' Eagle team has identified and corrected integration issues which have triggered false diagnostic codes (P0134 and P0154) following Smart Tune PRO installation on some models.

Base Screamin' Eagle stage calibrations for 2017-2019 Milwaukee-Eight® equipped models have incorporated this new strategy in the latest Pro Street Tuner software release (Version 12.002.5000).

Key Messages

Update dealership computers with the latest Pro Street Tuner software. The software is available for update now through the normal update process.

California update for the exceptions will be communicated as Harley-Davidson receive this approval.

Questions

Direct all other questions to the Dealer Services Representative.
