

SS 1033951 New Cascadia - Low Air Warning Audible Alert (Buzzer) Operation

New Cascadia - Low Air Warning Audible Alert (Buzzer) Operation

Applicable Vehicles

New Cascadia

Issue

Low air pressure warning comes up on the ICU display, but there is no audible alert - no warning buzzer.

Solution

When air pressure is low, it is normal for the low air warning audible alert (buzzer) to be suppressed when the park brake is set. When the park brake is released, the low air audible alert will sound anytime the low air warning message is displayed on the ICU.
